

ANALYTICS MODERNIZATION QUICK START

Can your analytic solutions handle today's challenges and growing data demands? Or are your legacy tools and strategies holding you back?

ENABLE BETTER USE OF DATA THROUGHOUT YOUR COMPANY WITH
OUR MODERNIZATION QUICK START.

HOW IT WORKS

Over the course of a few weeks, our analytics experts will assess your current analytics environment, develop a custom plan for migrating to a more modern platform, and start the migration process by modernizing a few of your reports. Here is what is included in the quick start:

Analytics Tools Assessment

We help you evaluate the strengths and weaknesses of a few modern analytics tools you are considering.

Analytics Bakeoff

We build proof-of-concept applications for up to three tools so you can compare and contrast features and functionality. We then guide an evaluation process to help you pick the best tool that meets your requirements.

POC Build

Choose a report from your legacy system and we'll migrate elements of it to the selected analytics tool—allowing you to experience the new look and feel and identify what improvements are needed.

Roadmap Planning

We build a migration roadmap that outlines the steps to migrate to the new tool. We also identify reports that can be retired and use cases for advanced analytics and data science to improve overall analytics at your company.

Production Build

We take the framework built during the POC Build phase and scale it into fully operationalized reporting within the new analytics tool so you can roll out the solution to end users.

Adoption and End User Training

We develop and deliver customized training for both IT and business users. We also do bootcamp training on production applications to help ensure adoption of the new solution.

WHAT YOU GET

At the end of the quick start, you will have:

Selected a new analytics tool that is the best fit for your company.

A modernization roadmap which clearly outlines the steps to migrate your existing reports and apps to your new modern tool of choice. This roadmap accelerates the migration process and minimizes disruption to your business so you can start taking advantage of the new tool quickly.

A POC application built in your new tool so you can test out features and functionality and get a feel for how the new tool looks and feels using your own data.

Reports that are fully migrated and re-platformed from your legacy tool to your new tool, adhering to best practices in data model design, performance optimization, and iterative UX development. Common data model elements will be mapped, reporting will be rebuilt and enhanced, and your new reporting environment will be configured and ready for production.
